DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Prior art was not relied upon to reject claims 1-16 because the prior art fails to teach and/or make obvious a sensor strip, comprising: a cover layer having a first major surface and a second major surface, the first major surface of the cover layer facing a first major surface of a base layer, the first major surface of the cover layer having a layer of mesh adhered thereto; a spacer layer interposed between the first major surface of the cover layer and the first major surface of the base layer to separate the cover layer from the base layer; and a flow channel having walls formed by the first major surface of the cover layer, the first major surface of the base layer, and the spacer layer, the flow channel having a reaction site therein, the layer of mesh not contacting the reaction site in combination with all of the remaining limitations of each base claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The prior art to US 2004/0238358 (Forrow et al.) is a US published application of WO 2004/108949. This reference teaches a base layer (11), a cover layer (32), a mesh layer (30), a spacer layer (24), a reaction site (28), and a sample application zone. The reference to Forrow et al. fails to teach, however, a mesh layer adhered to a first surface of the cover layer, whereby the mesh layer does not contact the reaction site.
